01 / IDENTITY

Logo and visual direction

Haunt

Ghost owl. Glowing orange spiral eyes.
Pale outline. Black surfaces.

The base reads black. Faint cool light at the edges can make it feel navy. Do not use broad navy fills.

Original logo; no artwork changes.

Black	Surface	Spectral white	Ember	Cool light
#060609	#0C0C11	#F1F4FF	#FF9A3D	#8996FF

02 / UI RULES

Color, typography and light

SURFACES

Base	#060609
Panel	#0C0C11
Raised	#121219
Hover	#1A1A24

At least 90% of the screen stays near-black. Cool light is decoration, never the panel color.

TYPE

Inter with system fallbacks.
Headings 20/28, weight 600.
Body 15/22, weight 400.
Controls 14/20, weight 600.
Metadata 12/16, weight 400.

COMPONENT EXAMPLES

Messages

Near-black surfaces. Crisp, unglowing text.

Join server

Focused input

Control radius 8px / Panel radius 12px

Cool edge light: 18px blur at 8% opacity.
Warm active light: 14px blur at 10%.
Optional background light: 4% maximum.
Focus: solid 2px pale outline with a 2px gap.

No logo filters, recoloring, pulsing, spinning eyes or glowing text. Use static light; respect reduced motion. No slogans or taglines.

03 / ASSETS

App-ready exports

Transparent PNG	16 to 2048px	`png/`
Web	ICO; 16/32/48; 192/512; touch 180	`web/`
Maskable web	192/512; black backing and safe padding	`web/`
Desktop	1024 PNG; Windows ICO; macOS ICNS	`desktop/`
Linux	Nine PNG sizes, 16 through 1024	`desktop/linux/`
Android	Five densities; adaptive layers and XML	`android/res/`
Store source	512px square; black backing	`android/play-store-512.png`

NATIVE-SIZE SAMPLES

16px 24px 32px 48px 64px

Padded launcher

Full owl retained inside safe areas.

04 / HANDOFF

Main agent implementation map

Display name

Use Haunt in titles, wordmark and launcher/installer labels. Keep existing technical IDs, storage keys and server addresses unless separately migrating them.

Web icons

Install web/ assets into the real public directory. Replace the static favicon, touch-icon links and theme color. Merge the example manifest with the real deployment scope.

Desktop packaging

Populate client/build/ from desktop/. The staging script copies build/icon.png into packaged resources. Update packaging source paths, not just generated resources.

Dynamic badges

badges.ts currently redraws an xo monogram. Use the approved owl for idle, unread, mentions, cleared counts and logout. Decode the image before drawing; preserve the 64px IPC contract.

Theme coverage

Audit hard-coded colors as well as variables. Keep surface fills near-black. Preserve user avatars and server icons. Validate contrast and focus in the finished UI.

Verify in the real app

Inspect browser reload and badge transitions, packaged OS icons and launcher masks. Asset checks do not prove runtime behavior. No app builds were performed for this kit.
